Cutting-edge, user-friendly, and comprehensive: the revolutionary guide to the brain, now fully revised and updated At birth each of us is given the most powerful and complex tool of all time: the human brain. And yet, as we well know, it doesn't come with an owner's manual—until now. In this unsurpassed resource, Dr. Pierce J. Howard and his team distill the very latest research and clearly explain the practical, real-world applications to our daily lives. Drawing from the frontiers of psychology, neurobiology, and cognitive science, yet organized and written for maximum usability, *The Owner's Manual for the Brain*, Fourth Edition, is your comprehensive guide to optimum mental performance and well-being. It should be on every thinking person's bookshelf. What are the ingredients of happiness? Which are the best remedies for headaches and migraines? How can we master creativity, focus, decision making, and willpower? What are the best brain foods? How is it possible to boost memory and intelligence? What is the secret to getting a good night's sleep? How can you positively manage depression, anxiety, addiction, and other disorders? What is the impact of nutrition, stress, and exercise on the brain? Is personality hard-wired or fluid? What are the best strategies when recovering from trauma and loss? How do moods and emotions interact? What is the ideal learning environment for children? How do love, humor, music, friendship, and nature contribute to well-being? Are there ways of reducing negative traits such as aggression, short-temperedness, or irritability? What is the recommended treatment for concussions? What do the world's most effective managers know about leadership, motivation, and persuasion? Plus 1,000s more topics! The greatest musical prodigy since Mozart (some would say he was even greater), Felix Mendelssohn (1809–1847) excelled in everything he did, musical or otherwise, and during his brief life became Europe's most respected and beloved composer. Yet no musician suffered more drastic swings in his posthumous reputation, and as a result Mendelssohn's music was obscured by a host of extra-musical factors: changes in taste, the rise of nationalism, anti-Semitism, and contempt for Victorian culture. This "owner's manual" offers a guide to Mendelssohn's musical output, major and minor, providing points of entry into a large body of work, much of which remains far too little known. There's much more to Mendelssohn than the "Italian" Symphony and the "Midsummer Night's Dream" Overture, and a whole creative world of vivid, expressive, and fantastical music is ready for exploration. At Last! A Beginner's Guide to Feline Technology Scratch marks on your furniture. Dead mice on your doorstep. Stray hairs all over your clothes. It's enough to make you cry out,

No-one approaches aging with enthusiasm. Activities we accomplish easily in our 20s and 30s become more difficult as we grow old but, though change is inevitable, recognising and understanding precisely what is happening to our bodies and minds allows us to continue to manage and enjoy our lives. Patrick Rabbitt is a cognitive gerontologist who has researched physical and mental aging for over 50 years and so can interpret his personal daily experiences of the aging process through a comprehensive understanding of what gerontological research has revealed about how our bodies and brains age, and how these changes affect our everyday experiences and lives. Engagingly written, Professor Rabbitt's book is a fascinating account of why our sensory and cognitive experiences change as we get older, and what these developments mean for our overall physical and emotional well-being. Describing the latest research the book covers the mental changes that affect our daily lives such as those in memory, intelligence, attention, sleep, vision and hearing, taste and smell, touch and balance, anxiety, depression and perception of the passage of time. It also discusses how far we can keep and develop the skills we have mastered over our lifetimes. The book debunks unhelpful myths about the aging process and offers guidance on how we can age better. This is an absorbing account of the aging process from one of the most eminent gerontologists working today. Its warmth and candour make it an engaging and helpful guide for those interested in understanding their own, or their relatives' ageing. Its rigour and comprehensiveness make ideal for students seeking an accessible alternative to standard textbooks on aging and for health professionals working with older people.
