The activities of the Department of Defense (DOD) and its contractors in manufacturing, testing, maintaining, and disposing of military equipment make up a significant portion of the industrial processes conducted in the United States. As is the case with the commercial industries, some of these activities, such as metal plating, have resulted in industrial pollution and environmental contamination. With increasing environmental regulation of such processes in recent decades, defense facilities have been faced with growing compliance issues. Department of Defense efforts to manage, correct, and prevent these problems have included the establishment of the National Defense Center for Environmental Excellence (NDCEE) under the management of the U.S. Army Industrial Ecology Center (IEC). The National Research Council's Committee to Evaluate Transfer of Pollution Prevention Technology for the U.S. Army was formed to identify major barriers to the transfer of pollution prevention technologies and to recommend pathways to success. To address the study objectives, the committee (1) reviewed the NDCEE's technology transfer activities, (2) examined efforts to transfer technology in four areas, two of which were identified at the outset by the NDCEE as successful and two of which were identified as unsuccessful, and (3) identified opportunities for improving the transfer of pollution prevention technologies to maintenance and rework facilities in the Department of Defense and to industrial manufacturing facilities performing defense-related operations. This book is a revised version of the author's PhD thesis, which was selected as the winning thesis of the 2001 ACM Doctoral Dissertation Competition. Ion Stoica did his PhD work at Carnegie Mellon University with Hui Zhang as thesis adviser. The author addresses the most pressing and difficult problem facing the Internet community today: how to enhance the Internet to support rich functionalities, such as QoS and traffic management, while still maintaining the scalability and robustness properties embodied in the original Internet architecture. The monograph presents complete solutions including architectures, algorithms, and implementations dealing with fundamental problems of today's Internet: providing guaranteed services, differentiated services, and flow protection. Compared to existing solutions, Ion Stoica's solution eliminates the complex operations on both data and control paths in the network core. All in all, the research results presented in this monograph constitute one of the most important contributions to networking

This book addresses the complexity, valuation and administrative nuances, and cultural impacts of resolving this significant cross-border issue when tax disputes arise. In recent years, transfer pricing has become in financial terms the most important tax issue faced by multinational companies and tax authorities worldwide. In times of economic downturn, as experienced in recent years, when tax authorities are challenged for revenue, the handling of these issues requires great care, skill, creativity and a true awareness of the ramifications confronting each tax jurisdiction. This book sets out in detail not only the general laws in each tax jurisdiction impacted by the multinational companies' transfer pricing practices, but also the ancillary concerns of how the issue is interpreted locally as well as related to the OECD Guidelines; the varied approaches to administrative resolution of these issues, including specific alternative dispute resolution mechanisms and the effective uses of advance pricing agreements; correlative adjustment procedures in the event of transfer pricing adjustments; cross-border exchange of information concerns; and how to proceed to litigation if all else fails administratively. It is here that the book delves into the specific procedures for litigation in each country which must be evaluated as part of the overall strategy for controversy resolution. Unfortunately, today litigation is on the rise in numerous jurisdictions and the presumption of an administrative resolution is no longer correct. An additional feature of this book is how practical anecdotes are intertwined into the analysis to give the reader a sense of pragmatism for these issues. To this point, there are the various case studies which highlight the technicalities of the local rules, customs, and practices. With its comprehensive, unified approach, this book will greatly assist the novice in need of a reference to chromatographic techniques, as well as the specialist suddenly faced with the need to switch from one technique to another. The most comprehensive resource available on the many applications of portable spectrometers, including material not found in any other published work Portable Spectroscopy and Spectrometry: Volume Two is an authoritative and up-to-date compendium of the diverse applications for portable spectrometers across numerous disciplines. Whereas Volume One focuses on the specific technologies of the portable spectrometers themselves, Volume Two explores the use of portable instruments in wide range of fields, including pharmaceutical development, clinical research, food analysis, forensic science, geology, astrobiology, cultural heritage

and archaeology. Volume Two features contributions by a multidisciplinary team of experts with hands-on experience using portable instruments in their respective areas of expertise. Organized both by instrumentation type and by scientific or technical discipline, 21 detailed chapters cover various applications of portable ion mobility spectrometry (IMS), infrared and near-infrared (NIR) spectroscopy, Raman and x-ray fluorescence (XRF) spectroscopy, smartphone spectroscopy, and many others. Filling a significant gap in literature on the subject, the second volume of Portable Spectroscopy and Spectrometry: Features a significant amount of content published for the first time, or not available in existing literature Brings together work by authors with assorted backgrounds and fields of study Discusses the central role of applications in portable instrument development Covers the algorithms, calibrations, and libraries that are of critical importance to successful applications of portable instruments Includes chapters on portable spectroscopy applications in areas such as the military, agriculture and feed, hazardous materials (HazMat), art conservation, and environmental science Portable Spectroscopy and Spectrometry: Volume Two is an indispensable resource for developers of portable instruments in universities, research institutes, instrument companies, civilian and government purchasers, trainers, operators of portable instruments, and educators and students in portable spectroscopy courses.
