Much contemporary scholarship on free will focuses on whether it is compatible with causal determinism. According to compatibilists, it is possible for an agent to be determined in all her choices and actions and still be free. Incompatibilists, on the other hand, think that the existence of free will is incompatible with the truth of determinism. There are two dominant general conceptions of the nature of free will. According to the first of these, free will is primarily a function of being able to do otherwise than one in fact does. On this view, free will centrally depends upon alternative possibilities. The second approach focuses instead on issues of sourcehood, holding that free will is primarily a function of an agent being the source of her actions in a particular way. This book demarcates these two different conceptions free will, explores the relationship between them, and examines how they relate to the debate between compatibilists and incompatibilists. It ultimately argues for a version of Source Incompatibilism. Political theory, from antiquity to the present, has been divided over the relationship between the requirements of justice and the limitations of persons and institutions to meet those requirements. Some theorists hold that a theory of justice should be utopian or idealistic--that the derivation of the correct principles of justice should not take into account human and institutional limitations. Others insist on a realist or non-utopian view, according to which feasibility--facts about what is possible given human and institutional limitations--is a constraint on principles of justice. In recent years, the relationship between the ideal and the real has become the subject of renewed scholarly interest. This anthology aims to represent the contemporary state of this classic debate. By and large, contributors to the volume deny that the choice between realism and idealism is binary. Rather, there is a continuum between realism and idealism that locates these extremes of each view at opposite poles. The contributors, therefore, tend to occupy middle positions, only leaning in the ideal or non-ideal direction. Together, their contributions not only represent a wide array of attractive positions in the new literature on the topic, but also collectively advance how we understand the difference between idealism and realism itself. There are 42 Quintillion possibilities to solving a Rubik's cube, but there is only one correct solution. Gifted: A Story of Saints and Sinners takes you into the troubled, Rubik's cube-like mind of Kevin Grier as he navigates his way through life from childhood, adolescence, and adulthood. This is a story about family, friendship and brotherhood, growing pains, sex, hardships, and legacy. Enjoy! Discovering Possibility is a primer for the Common Sense Conservative Movement in America. Readers will find something refreshing in this timely book, in which the author, a marriage and family therapist, teacher, and community-builder, draws from a rich sociological perspective to outline an optimistic roadmap for restoring America. The author integrates the humanistic classical liberalism of the American Founders, libertarian psychology, and Northeastern cultural conservatism in order to reinvigorate a once common cultural identity in America that has been pushed aside by the forces of progressivism and religious fundamentalism. Discovering Possibility is novel, bold, inspirational, and

practical at a time when many are seeking solutions. *Discovering Possibility* offers a way forward for Common Sense Conservatives who are the New Centrists in America and part of the growing grass roots movement to rediscover America. A war between China and the US would be catastrophic, deadly, and destructive. Unfortunately, it is no longer unthinkable. The relationship between the US and China, the world's two superpowers, is peculiarly volatile. It rests on a seismic fault—of cultural misunderstanding, historical grievance, and ideological incompatibility. No other nations are so quick to offend and be offended. Their militaries play a dangerous game of chicken, corporations steal intellectual property, intelligence satellites peer, and AI technicians plot. The capacity for either country to cross a fatal line grows daily. Kevin Rudd, a former Australian prime minister who has studied, lived in, and worked with China for more than forty years, is one of the very few people who can offer real insight into the mindsets of the leadership whose judgment will determine if a war will be fought. *The Avoidable War* demystifies the actions of both sides, explaining and translating them for the benefit of the other. Geopolitical disaster is still avoidable, but only if these two giants can find a way to coexist without betraying their core interests through what Rudd calls “managed strategic competition.” Should they fail, down that path lies the possibility of a war that could rewrite the future of both countries, and the world. How can the poor and weak 'work' a political system to their advantage? Drawing mainly on interviews and surveys in rural China, Kevin O'Brien and Lianjiang Li show that popular action often hinges on locating and exploiting divisions within the state. Otherwise powerless people use the rhetoric and commitments of the central government to try to fight misconduct by local officials, open up clogged channels of participation, and push back the frontiers of the permissible. This 'rightful resistance' has far-reaching implications for our understanding of contentious politics. As O'Brien and Li explore the origins, dynamics, and consequences of rightful resistance, they highlight similarities between collective action in places as varied as China, the former East Germany, and the United States, while suggesting how Chinese experiences speak to issues such as opportunities to protest, claims radicalization, tactical innovation, and the outcomes of contention. Kevin Madigan examines the reasoning and actions behind high-medieval responses to reconciling the seemingly incongruent features of Jesus Christ's divinity and humanity. This book poses a question that is deceptive in its simplicity: could international law have been otherwise? Today, there is hardly a serious account left that would consider the path of international law to be necessary, and that would refute the possibility of a different law altogether. But behind every possibility of the past stands a reason why the law developed as it did. Only with a keen sense of why things turned out the way they did is it possible to argue about how the law could plausibly have turned out differently. The search for contingency in international law is often motivated, as it is in this volume, by a refusal to resign to the present state of affairs. By recovering past possibilities, this volume aims to inform projects of transformative legal change for the future. The book situates that search for contingency theoretically and carries it into practice across many fields, with chapters discussing human rights and armed conflict, migrants and refugees, the sea and natural resources, foreign investments and trade. In doing so, it shows how politically charged questions about contingency have always been. Choosing the right colour for your home can be fraught with difficulties, and with thousands of shades of paint available in DIY stores the choice can be overwhelming. Kevin McCloud has taken the hard work out of home decorating by researching, selecting, and combining over 750 colours that will transform your home. This book explores legal mobilization, culture, and institutions in contemporary China from a perspective informed by 'law and society' scholarship. Debates about contemporary Islam and Muslims in the West have taken some negative turns in the depressing atmosphere of the war on terror and its aftermath. This book argues that we have been too preoccupied with problems, not enough with solutions. The increased mobilisation and scrutiny of Muslim identities has taken place in the context of a more general recasting of racial ideas and racism: a shift from overtly racial to ostensibly ethnic and cultural including religious categories within discourses of social difference. The targeting of Muslims has been associated with new forms of an older phenomenon: imperialism.

New divisions between Muslims and others echo colonial binaries of black and white, colonised and coloniser, within practices of divide and rule. This book speaks to others who have been marginalised and colonised, and to wider debates about social difference, oppression and liberation. Practical Audio Electronics is a comprehensive introduction to basic audio electronics and the fundamentals of sound circuit building, providing the reader with the necessary knowledge and skills to undertake projects from scratch. Imparting a thorough foundation of theory alongside the practical skills needed to understand, build, modify, and test audio circuits, this book equips the reader with the tools to explore the sonic possibilities that emerge when electronics technology is applied innovatively to the making of music. Suitable for all levels of technical proficiency, this book encourages a deeper understanding through highlighted sections of advanced material and example projects including circuits to make, alter, and amplify audio, providing a snapshot of the wide range of possibilities of practical audio electronics. An ideal resource for students, hobbyists, musicians, audio professionals, and those interested in exploring the possibilities of hardware-based sound and music creation. On Liking the Other: Queer Subjects and Religious Discourses studies the intersection of religious and queer discourses in teacher education. It looks at the sometimes difficult topics rooted in these two particular discourses, which are often seen as unwelcome in both public and private educational spaces. In engaging in such a conversation, the authors seek the ways that these discourses, while steeped in discontent, dilemma, and difficulty, might also offer ways to reorient ourselves amidst twenty-first century educational realities. More to the point, the text puts queer histories and logics into conversations with theologies through the concept of liking. Eschewing the typical antagonism that often defines the relationships between religious and queer discourses, this book looks for resonances and overlaps that might provide new habits for conducting the work of meeting in teacher education classrooms and educational worlds. It is an excellent text for a variety of classrooms and courses. *On Liking the Other* is structured in three sections, with each section divided into two chapters. Within each section, the authors explore an overarching theme through their distinct, albeit related, perspectives. This is to allow each perspective to be given its due, while also drawing on the knowledge of one another at particular junctures. Like a conversation in person, this recognizes the ways conversations (as opposed to monologues) happen and, in doing so, helps to add clarification and additional details. Kevin J. Burke is a curriculum theorist whose scholarship operates at the intersection of religion, masculinities, and English education. Adam J. Greteman is a philosopher of education whose scholarship operates at the intersection of queer theories, sexualities, and Art education. Both authors are deeply invested in the work of Teacher Education, particularly in thinking through the conundrums of engaging pre-service teachers who bring to Teacher Education classrooms and eventually their own classrooms their religious, gendered, and sexual subjectivities. The conversations here, attempting to orient ourselves differently, are meant to open up space for complicated conversations that are foundational to the work of curriculum. Perfect for courses such as: Queer Theory in Education | Multicultural Education | Critical Educational Foundations | Human Diversity, Power and Opportunity in Social Institutions | Diversity in Education | Diversity and Inclusive Teaching | Multicultural and Equity Studies in Education

Complementary and Alternative Medicine is a sociological investigation of complementary and alternative medicine (CAM) in contemporary society, and an exploration of the forces throughout the globe, across different institutions, and within different therapeutic spaces, that constrain or foster alternative medicine. Drawing on 30 years of research, the book identifies the trends in the use of CAM and explores the scientific, political and social challenges that CAM faces in relation to orthodox medicine. The author examines the varieties of CAM practices and how they manifest in different institutional spaces – including public inquiries, the orthodox medical practitioner ’ s consulting room, medical journals and the homes of those who use CAM. It also compares unorthodox practices in different geo-political settings, namely the global north and the global south. This book is valuable reading for higher-level undergraduate and postgraduate social science students, including those in psychology, sociology, anthropology, health sciences and

related disciplines. It is relevant for courses in medical sociology, medical anthropology and social science and health, and a broader audience interested in contemporary health issues, controversies and alternative medicine. Twitter can be a powerful tool for educators whether they use it to connect with their peers or enhance classroom instruction. Twitter can also be intimidating for first time users who don't fully understand the language, purpose, and culture that have developed around this social media platform. Even experienced users can find some tips and tricks that will improve their Twitter experience, and all it takes is TwirtyDays. Accelerate your journey to smarter decision making by mastering the fundamentals of data literacy and developing the mindset to work confidently with data

Key Features

- Get a solid grasp of data literacy fundamentals to support your next steps in your career
- Learn how to work with data and extract meaningful insights to take the right actions
- Apply your knowledge to real-world business intelligence projects

Book Description

Data is more than a mere commodity in our digital world. It is the ebb and flow of our modern existence. Individuals, teams, and enterprises working with data can unlock a new realm of possibilities. And the resultant agility, growth, and inevitable success have one origin—data literacy. This comprehensive guide is written by two data literacy pioneers, each with a thorough footprint within the data and analytics commercial world and lectures at top universities in the US and the Netherlands. Complete with best practices, practical models, and real-world examples, *Data Literacy in Practice* will help you start making your data work for you by building your understanding of data literacy basics and accelerating your journey to independently uncovering insights. You'll learn the four-pillar model that underpins all data and analytics and explore concepts such as measuring data quality, setting up a pragmatic data management environment, choosing the right graphs for your readers, and questioning your insights. By the end of the book, you'll be equipped with a combination of skills and mindset as well as with tools and frameworks that will allow you to find insights and meaning within your data for data-informed decision making. What you will learn

- Start your data literacy journey with simple and actionable steps
- Apply the four-pillar model for organizations to transform data into insights
- Discover which skills you need to work confidently with data
- Visualize data and create compelling visual data stories
- Measure, improve, and leverage your data to meet organizational goals
- Master the process of drawing insights, ask critical questions and action your insights
- Discover the right steps to take when you analyze insights

Who this book is for

This book is for data analysts, data professionals, and data teams starting or wanting to accelerate their data literacy journey. If you're looking to develop the skills and mindset you need to work independently with data, as well as a solid knowledge base of the tools and frameworks, you'll find this book useful. It is important to see both Marx's brilliant generalisations about capitalist society and the very concrete ways in which he examined not only class, but also gender, race, and colonialism, and what today would be called the intersectionality of all of these. His underlying revolutionary humanism was the enemy of all forms of abstraction that denied the variety and multiplicity of human experience, especially as his vision extended outward from Western Europe. For these reasons, no thinker speaks to us today with such force and clarity. It is clear today that the emancipation of labour from capitalist alienation and exploitation is a task that still confronts us. Marx's concept of the worker is not limited to European white males, but includes Irish and Black super-exploited and therefore doubly revolutionary workers, as well as women of all races and nations. But, his research and his concept of revolution go further, incorporating a wide range of agrarian non-capitalist societies of his time, from India to Russia and from Algeria to the Indigenous peoples of the Americas, often emphasising their gender relations. In his last, still partially unpublished writings, he turns his gaze Eastward and Southward. In these regions outside Western Europe, he finds important revolutionary possibilities among peasants and their ancient communistic social structures, even as these are being undermined by their formal subsumption under the rule of capital. In his last published text, he envisions an alliance between these non-working-class strata and the Western European working class. This text explores the issue of the anti-brand backlash and

takes a close look at the future of the global brand and what e-commerce companies must do to make sure their brand names stand out and make a lasting impression. It's a story about Him and Her, He and She, they are two young people who claim to live in a dream world. But then again these two may be any one of you living in what we have come to perceive as the reality in the world around us. These two embark upon a journey, an adventure across different and strange time frames in search of nothing and in doing so weave a collection of magical and allegorical stories dealing with many regular and interesting life titbits that we all take for granted, ranging from the happenings of a farmhouse in 1961 Australia to the present times where we get to see the White House and the President and then moving on to various social institutions like schools, offices, churches and thereby gaining access into various homes and lives where varied topics ranging from the far reaching possibilities and yet futility of Life & Death, God & Religion, Love & Sex, Loyalty & Friendship and many others are touched upon in a sort of non traditional manner relying a lot on satire and sarcasm to convey such messages. Christmas in Hawaii is just what she needs... When a disaster with her former boss sends Jessica Warwick to Hawaii to dog-sit for a college friend, she expects to spend a few months escaping her past and working out her future. And Christmas on the North Shore in Hawaii definitely qualifies as a nice consolation prize after her frightening Thanksgiving. She doesn't count on the sexy firefighter next door disturbing her peace. Kevin Nakoa knows Jessica spells disaster the minute his neighbor introduces the new dog-sitter. She's temporary, only on Oahu for six months, and Kevin isn't a winter fling kind of guy. Even if the sexy New Yorker has him rethinking that stance. But he promised his neighbor he'd keep an eye on Jessica. And when an escaped dog forces him into spending time with her, Kevin knows he's in trouble. Christmas in Hawaii brings a reckoning for Jessica. But also a lot of hope. And with Kevin, the possibility for more.

Today, greater appreciation for the emergence and evolution of sociality within and across both taxonomic and technological boundaries has scientists exploring the possibility that, in addition to vertebrates, insects, molluscs, plants, and microbes; even robots, learn from observing and modelling the actions of others. This book presents these and additional exciting new themes to readers through a collection of chapters written by international authorities. The contents of this book bridge scientific revolutions in socio-biology to advance contemporary and perhaps future understandings in diverse topics, such as plant intelligence, robotic active learning, host-pathogen interactions, insect culture, fish and cephalopod mating habits, predator-prey dynamics, microbial sociality, and cognitive ageing. "A woman translates the stories of survivors of the war in the former Yugoslavia for a Swedish therapist. As the therapist seemingly grows ever more indifferent, the translator struggles to maintain her professional distance. Simply saying the words is not enough. She finds herself risking her job, her sense of perspective and even her sanity in order to connect with the people she encounters, and with one in particular. As she attempts to tell her own story, she can only do so through the stories she has translated for others." --Book Jacket. Kevin J. Edwards, Ph. Dad earned his doctoral degree at the University of Kansas in Human Development and Family Life and Child Psychology. Dad of four wonderfully active children, and husband to an equally busy spouse, Kevin has used practical experience and education to teach many parents about shaping positive self-esteem for their children. Reading *What Will I Be?* sends a positive message about the wide world of possibilities available to our children. From the author of the New York Times bestseller *The Inevitable*— a sweeping vision of technology as a living force that can expand our individual potential This provocative book introduces a brand-new view of technology. It suggests that technology as a whole is not a jumble of wires and metal but a living, evolving organism that has its own unconscious needs and tendencies. Kevin Kelly looks out through the eyes of this global technological system to

discover "what it wants." He uses vivid examples from the past to trace technology's long course and then follows a dozen trajectories of technology into the near future to project where technology is headed. This new theory of technology offers three practical lessons: By listening to what technology wants we can better prepare ourselves and our children for the inevitable technologies to come. By adopting the principles of pro-action and engagement, we can steer technologies into their best roles. And by aligning ourselves with the long-term imperatives of this near-living system, we can capture its full gifts. Written in intelligent and accessible language, this is a fascinating, innovative, and optimistic look at how humanity and technology join to produce increasing opportunities in the world and how technology can give our lives greater meaning. Globally, 2.1 billion people live without access to safe water, and about 159 million people collect their drinking water directly from surface water sources. This issue is particularly prominent in water-stressed areas, such as India, which has a rural population of around 700 million, 63 million of whom do not have access to clean water. Contaminants of Emerging Concern (CECs), of both a chemical and biological nature, are increasingly being detected in wastewater effluents around the world. Chemical CECs include pollutants such as pharmaceuticals and personal care products, pesticides, hormones, and endocrine disruptors, and biological CECs include antibiotic resistant bacteria, pathogenic protozoans, and viruses. New technologies to remove the contaminants from water are urgently needed and photochemical approaches offer an exciting array of possibilities. Covering chemical analysis, molecular biology methods and computational approaches important for the elucidation of mechanisms and evaluation of photochemical processes, this book presents advanced photochemical processes for the removal of CECs from water. Readers will find chapters on advanced photochemical treatment prototypes and pilot plants, and discussions on translation from lab to field-scale implementation. Examples include highly transparent materials, integrated membranes, adsorbents, and photocatalysts for enhancing the photochemical processes by direct sunlight induced reactions, photo-Fenton, and photo-electrochemical reactions. Discussing both the advantages and disadvantages of these technologies, this book is a great resource both for academics researching photocatalytic processes and for water treatment professionals. Thirteen extraordinary people from around the world share their experiences with choosing beyond where they have ever been and what it created in their lives. We have all been to the place where we felt like we could not take another step in our lives. Then we do, and all of life opens up. Ready to dip your toes into the pond of possibilities and play? Are you ready to call in the magic that could be your life? We are here to embrace the instantaneous energies of possibility. This book shares some amazing creation tools and ways to open to a life which may not have been fathomed yet. What if everything we were told about how to have a joyful, amazing life was total bunk up to this point? Could taking one more step expand all possibilities available? We've all chosen to keep going after being knocked down or disappointed. If everything is energy, what energy could we be to create the life we desire? What could we choose that could open the energies of our lives? If we keep merely existing the way we always have, we will keep experiencing the same things again and again. How much fun has that been? Could choosing beyond where we have been be more of a contribution to what we would like in our lives? What if it is easier than we think? Contributors include Carol Updike Reinlie, Lisa Henriksson, Max Riggs, Sigrid Welder, Alun Jones, Lee Flanagan, Tim Forrest, Tamara Robeer, Sara Buchanan, Moya Finer, Arlene Manning, Kevin Kitrell Ross and Tanja Barth. How much fun could we have exploring the energies of possibility? What magic could we be out in the world? Now a major motion picture starring Tilda Swinton. Published in twenty-eight countries. Over a million copies sold worldwide. Two years ago Eva Khatchadourian 's son, Kevin, murdered seven of his fellow high-school students, a cafeteria worker and a popular teacher. Now, in a series of letters to her absent husband, Eva recounts the story of how Kevin came to be Kevin. Fearing that her own shortcomings may have shaped what her son has become, she confesses to a deep, long-standing ambivalence about both motherhood in general and Kevin in particular. How much is her fault? When did it all start to go wrong? Or was it, in fact, ever ' right ' at all? Lionel Shriver tells a compelling, absorbing,

and resonant story while framing the horrifying tableau of teenage carnage as a metaphor for the larger tragedy—the tragedy of a country where everything works, nobody starves and anything can be bought but a sense of purpose. ‘ By far the best novel I ’ ve read in years...exquisitely crafted...a breathtaking work of art. ’ Age ‘ Brilliant...compulsive. ’ Guardian ‘ A great read with horrifying twists and turns. ’ Marie Claire ‘ Harrowing, tense and thought-provoking, this is a vocal challenge to every accepted parenting manual you ’ ve ever read. ’ Daily Mail Encouraging new thinking about conventional understandings of human rights, this book will strongly appeal to international lawyers, legal and political philosophers, as well as graduate students and upper-level undergraduate students in law and philosophy

Inside the epic quest to find life on the water-rich moons at the outer reaches of the solar system Where is the best place to find life beyond Earth? We often look to Mars as the most promising site in our solar system, but recent scientific missions have revealed that some of the most habitable real estate may actually lie farther away. Beneath the frozen crusts of several of the small, ice-covered moons of Jupiter and Saturn lurk vast oceans that may have existed for as long as Earth, and together may contain more than fifty times its total volume of liquid water. Could there be organisms living in their depths? Alien Oceans reveals the science behind the thrilling quest to find out. Kevin Peter Hand is one of today's leading NASA scientists, and his pioneering research has taken him on expeditions around the world. In this captivating account of scientific discovery, he brings together insights from planetary science, biology, and the adventures of scientists like himself to explain how we know that oceans exist within moons of the outer solar system, like Europa, Titan, and Enceladus. He shows how the exploration of Earth's oceans is informing our understanding of the potential habitability of these icy moons, and draws lessons from what we have learned about the origins of life on our own planet to consider how life could arise on these distant worlds. Alien Oceans describes what lies ahead in our search for life in our solar system and beyond, setting the stage for the transformative discoveries that may await us. Military organizations around the world are normally huge producers and consumers of data. Accordingly, they stand to gain from the many benefits associated with data analytics. However, for leaders in defense organizations—either government or industry—accessible use cases are not always available. This book presents a diverse collection of cases that explore the realm of possibilities in military data analytics. These use cases explore such topics as: Context for maritime situation awareness Data analytics for electric power and energy applications Environmental data analytics in military operations Data analytics and training effectiveness evaluation Harnessing single board computers for military data analytics Analytics for military training in virtual reality environments A chapter on using single board computers explores their application in a variety of domains, including wireless sensor networks, unmanned vehicles, and cluster computing. The investigation into a process for extracting and codifying expert knowledge provides a practical and useful model for soldiers that can support diagnostics, decision making, analysis of alternatives, and myriad other analytical processes. Data analytics is seen as having a role in military learning, and a chapter in the book describes the ongoing work with the United States Army Research Laboratory to apply data analytics techniques to the design of courses, evaluation of individual and group performances, and the ability to tailor the learning experience to achieve optimal learning outcomes in a minimum amount of time. Another chapter discusses how virtual reality and analytics are transforming training of military personnel. Virtual reality and analytics are also transforming monitoring, decision making, readiness, and operations. Military Applications of Data Analytics brings together a collection of technical and application-oriented use cases. It enables decision makers and technologists to make connections between data analytics and such fields as virtual reality and cognitive science that are driving military organizations around the world forward. mesmerizing and funny sentences and then hits you in a way you didn't see coming. You're laughing so hard you don't even realize that you've suddenly caught fire." —Taffy Brodesser-Akner, author of *Fleishman is in Trouble*, *New York Times Book Review* From the *New York Times* bestselling author of *The Family Fang*, a moving and uproarious novel about a woman who finds meaning in her life when she begins caring for two children with a remarkable ability. Lillian and Madison were unlikely roommates and yet inseparable friends at their elite boarding school. But then Lillian had to leave the school unexpectedly in the wake of a scandal and they've barely spoken since. Until now, when Lillian gets a letter from Madison pleading for her help. Madison's twin stepkids are moving in with her family and she wants Lillian to be their caretaker. However, there's a catch: the twins spontaneously combust when they get agitated, flames igniting from their skin in a startling but beautiful way. Lillian is convinced Madison is pulling her leg, but it's the truth. Thinking of her dead-end life at home, the life that has consistently disappointed her, Lillian figures she has nothing to lose. Over the course of one humid, demanding summer, Lillian and the twins learn to trust each other—and stay cool—while also staying out of the way of Madison's buttoned-up politician husband. Surprised by her own ingenuity yet unused to the intense feelings of protectiveness she feels for them, Lillian ultimately begins to accept that she needs these strange children as much as they need her—urgently and fiercely. Couldn't this be the start of the amazing life she'd always hoped for? With white-hot wit and a big, tender heart, Kevin Wilson has written his best book yet—a most unusual story of parental love. For nearly three quarters of a century, the modernist way of reading has been the only way of reading Joyce - useful, yes, and powerful but, like all frameworks, limited. This book takes a leap across those limits into postmodernism, where the pleasures and possibilities of an unsuspected Joyce are yet to be found. Kevin J. H. Dettmar begins by articulating a stylistics of postmodernism drawn from the key texts of Roland Barthes, Mikhail Bakhtin, and Jean-Francois Lyotard. Read within this framework, *Dubliners* emerges from behind its modernist facade as the earliest product of Joyce's proto-post-modernist sensibility. Dettmar exposes these stories as tales of mystery, not mastery, despite the modernist earmarks of plentiful symbols, allusions, and epiphanies. *Ulysses*, too, has been inadequately served by modernist critics. Where they have emphasized the work's ingenious Homeric structure, Dettmar focuses instead upon its seams, those points at which the narrative willfully, joyfully overflows its self-imposed bounds. Finally, he reads *A Portrait of the Artist and Finnegans Wake* as less playful, less daring texts - the first constrained by the precious, would be poet at its center, the last marking a surprising retreat from the constantly evolving, vertiginous experience of *Ulysses*. Duncan has nowhere to run when he creates Z4CK, software which bypasses any network security. Nervous government agencies will do anything to obtain it. This cyber thriller, unlike films such as *The Net*, provides an insight into realistic hacker techniques, whilst not becoming too technical, allowing anyone to enjoy it. A wry and poignant debut novel about a man's search for true connection that is "both knowing and cutting, a satire of internet culture that is also a moving portrait of a lost human being" (*Los Angeles Times*). "A knowing and thought-provoking exploration of love, modern isolation, and what it means to exist—especially as a person of color—in our increasingly digital age." —Celeste Ng, bestselling author of *Everything I Never Told You* and *Little Fires Everywhere* ONE OF THE BEST BOOKS OF THE YEAR—NPR, *The New York Public Library*, *Parade*, *Kirkus Reviews* Lucas and Margo are fed up. Margo is a brilliant programmer tired of being talked over as the company's sole black employee, and while Lucas is one of many Asians at the firm, he's nearly invisible as a low-paid customer service rep. Together, they decide to steal their tech startup's user database in an attempt at revenge. The heist takes a sudden turn when Margo dies in a car accident, and Lucas is left reeling, wondering what to do with their secret—and wondering whether her death really was an accident. When Lucas hacks into Margo's computer looking for answers, he is drawn into her private online life and realizes just how little he knew about his best friend. With a fresh voice, biting humor, and piercing observations about human nature, Kevin Nguyen brings an insider's knowledge of the tech industry to this imaginative novel. A pitch-perfect exploration of race and startup culture, secrecy and

surveillance, social media and friendship, *New Waves* asks: How well do we really know one another? And how do we form true intimacy and connection in a tech-obsessed world? Praise for *New Waves*

“ Nguyen ’ s stellar debut is a piercing assessment of young adulthood, the tech industry, and racism. . . . Nguyen impressively holds together his overlapping plot threads while providing incisive criticism of privilege and a dose of sharp humor. The story is fast-paced and fascinating, but also deeply felt; the effect is a page-turner with some serious bite. ” —Publishers Weekly (starred review)

“ A blistering sendup of startup culture and a sprawling, ambitious, tender debut. ” —Kirkus Reviews (starred review)

Can life be better after a brain injury? We think so... Are you one of the millions of people who suffer from a concussion every year? Or has someone in your family suffered from a mild traumatic brain injury and you feel that there is little or nothing you can do about it? Then this book is for you! We believe that Post Concussion Syndrome (PCS) is the #1 Silent, Secret Killer of Relationships, Careers and Lives. Whether it happens from an auto accident, a fall, domestic violence, or a sports related injury, there is help and there is hope for recovery. The goal of this book is to provide some insights and possibilities by following one man's revealing journey from motorcycle accident, to discovering he had a brain injury, to finding ways he could live an extraordinary life again. "Concussion Transformation" is about finding the hope and resources to transform your tragedy into a triumph! The brain is still a vast unexplored universe and complex mystery. Even the slightest brain trauma can have major effects to the person who was injured and symptoms manifest differently in each victim. Often times brain injuries go undiagnosed, are left untreated and therefore the person suffers alone and is often left thinking they are going crazy and have no hope. Some symptoms include: personality shifts, loss of interest in activities that were once important, depression, anger, anxiety attacks, and many more. "ConcussionTransformation" was written to give the reader 7 simple steps the author, Kevin Donahue, used in his own recovery. No one needs to suffer alone. Help us bring this struggle and suffering out of the darkness and into the light. Share this book with friends, family, or anyone who may be going through the terrible struggle of Post Concussion Syndrome. We are survivors and together we can make our lives better and thrive by shining a light on this silent secret killer. Join us in helping to provide community, hope and prosperity to those who need it most! Join our movement and growing community and share your story at: www.concussionrecoverynetwork.com and www.facebook.com/concussionrecovery Thank you, Kevin Donahue Born in 1966&, a generation removed from the counterculture&, Kevin Mattson came of political age in the conservative Reagan era. In an effort to understand contemporary political ambivalence and the plight of radicalism today&, Mattson looks back to the ideas that informed the protest&, social movements&, and activism of the 1960s. To accomplish its historical reconstruction&, the book combines traditional intellectual biography&—including thorough archival research&—with social history to examine a group of intellectuals whose thinking was crucial in the formulation of New Left political theory. These include C. Wright Mills&, the popular radical sociologist; Paul Goodman&, a practicing Gestalt therapist and anarcho-pacifist; William Appleman Williams&, the historian and famed critic of &"American empire&"; Arnold Kaufman&, a &"radical liberal&" who deeply influenced the thinking of the SDS. The book discusses not only their ideas&, but also their practices&, from writing pamphlets and arranging television debates to forming left-leaning think tanks and organizing teach-ins protesting the Vietnam War. Mattson argues that it is this political engagement balanced with a commitment to truth-telling that is lacking in our own age of postmodern acquiescence. Challenging the standard interpretation of the New Left as inherently in conflict with liberalis&, Mattson depicts their relationship as more complicated&, pointing to possibilities for a radical liberalism today. Intellectual and social historians&, as well as general readers either fascinated by the 1960s protest movements or actively seeking an alternative to our contemporary political malais&, will embrace Mattson& ’ s book and its promise to shed new light on a time period known for both its intriguing conflicts and its enduring consequences. "A superb job... A tantalizing glimpse of the ethical perils and technological possibilities awaiting humanity." -- Los Angeles Times"A rollicking good tale about an enduring

intellectual monument." -- American Scientist "Davies has tracked one of the most important stories ever to unfold. Davies helps readers understand how the deciphering of our genetic code will revolutionize our lives while posing serious ethical dilemmas." -- Science News A selection of the best tools available for individuals and small groups.
