Churchill Tank 1941-1952 (all models) Sep 27 2020 The Churchill tank has a strong case to be acclaimed the best British tank of World War 2. This is not to discount the achievements of the later Comet, but this tank only arrived as the Rhine was being crossed in 1945 and saw limited action. The Churchill tank slugged it out in all kinds of terrain – and proved itself to be capable of absorbing an astonishing amount of punishment. When hit, it was less prone than the Sherman to catching fire immediately, and it was certainly much better armored. Although slower than its contemporary the Cromwell, the Churchill's true role was as an Infantry tank – to fight alongside soldiers on foot. In this role it performed superbly. This manual is based around the complete restoration in the UK of Churchill Tank Mk IV, T31579, which was built in 1941. The Churchill Mk IV was an evolution of the Mk III in which the principal difference was the cast turret, replacing the welded one on the Mk III. The armament was either a 6-pounder or a 75mm gun. Together with the Mk III, the Churchill Mk IV was present in most actions in Italy and North West Europe and with the Mk III it was the mainstay for most Churchill tank-equipped regiments after 1942.

This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.

TM 9-775 Landing Vehicle Tracked, Lvt Mk. I and Mk. II Technical Manual
Apr 03 2021 The Landing Vehicle Tracked (LVT) was a class of amphibious

warfare vehicle, a small landing craft, introduced by the United States Navy, Marine Corps and Army during World War II. Originally intended solely as cargo carriers for ship to shore operations, they rapidly evolved into assault troop and fire support vehicles as well. The LVT Mark I was the first military model. Traveling at a respectable six knots in the water and twelve mph on land, it could deliver twenty four fully equipped assault troops to the beach. Though it was only intended for delivering supplies inland until wheeled vehicles could be brought ashore, the LVT could supply supporting fire from two .30 cal M1919 Browning machine guns. Many LVTs were refitted prior to the Tarawa landing to hold two .50 cal Browning heavy machine guns forward, with the .30 cal guns aft. The vehicle was not armored and its thin steel hull offered virtually no protection, although prior to Tarawa some vehicles received nine mm of armor plating to the cab. The LVT's tracks performed well on sand, but not on tough surfaces. The rigid suspension threw tracks and roller bearings corroded in salt water. Proper maintenance of the new machine was often an issue, as few Marines were trained to work on it, and early models suffered frequent breakdowns. The LVT Mark II featured new powertrain and torsilastic suspension. The aluminium track grousers were bolted on, making changes much easier since they wore out quickly on land and more so on coral. Hard terrain performance was much better compared to the LVT Mark I. Created in 1944, this technical manual reveals a great deal about the LVT's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of its engine, cooling, fuel, powertrain and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.
