McGraw identifies the seven reasons other diets fail people over and over again, and then addresses each of the roadblocks to help you create a plan you can work with for the rest of your life. He focuses on twenty key ingredients reputed to enhance the body's thermogenesis and create a feeling of fullness, as well as healthy habits to maintain the results. This book examines key features, problems, and implications of the 2016–2017 Candlelight Movement, a historical cornerstone for democracy and social movements in South Korea. The Candlelight

Movement brought profound social changes with important lessons and questions for scholars, practitioners, activists, and the public. To examine the full complexity of the movement, this edited volume utilises wide-ranging methodological and theoretical approaches, which include case study approaches, ethnography, survey, feminist film criticism, critical discourse analysis, and rhetorical criticism. Chapters place 'communication' at the centre of their analyses, calling attention to the mediated and mediatised, the performative and other discursive practices of the 2016–2017 Candlelight Movement. In doing so, the book discusses not only the usual players and factors – nor the institutions that exert their influence through democratic politics and the public sphere – but also the counter-public embracing new and social media, collective singing, the body, and performance, as their choice of political media. As such, this volume offers important insights into how communication plays a critical role in forming, moving, and transforming new social movements. The Candlelight Movement, Democracy, and Communication in Korea will appeal to students and scholars of communication and media studies, political science, sociology, and Korean studies.

Metaphysics and Hermeneutics in the Medieval Platonic Tradition consists of twelve essays originally published between 2006 and 2015, dealing with main trends and specific figures within the medieval Platonic tradition. Three essays provide general surveys of the transmission of late ancient thought to the Middle Ages with emphasis on the ancient authors, the themes, and their medieval readers, respectively. The remaining essays deal especially with certain major figures in the Platonic tradition, including pseudo-Dionysius the Areopagite, Iohannes Scottus Eriugena, and Nicholas of Cusa. The principal conceptual aim of the collection is to establish the primacy of hermeneutics within the philosophical program developed by these authors: in other words, to argue that their philosophical activity, substantially albeit not exclusively, consists of the reading and evaluation of authoritative texts. The essays also argue that the role of hermeneutics varies in the course of the tradition between being a means towards the development of metaphysical theory and being an integral component of metaphysics itself. In addition, such changes in the status

and application of hermeneutics to metaphysics are shown to be accompanied by a shift from emphasizing the connection between logic and philosophy to emphasizing that between rhetoric and philosophy. The collection of essays fills in a lacuna in the history of philosophy in general between the fifth and the fifteenth centuries. It also initiates a dialogue between the metaphysical hermeneutics of medieval Platonism and certain modern theories of hermeneutics, structuralism, and deconstruction. The book will be of special interest to students of the classical tradition in western thought, and more generally to students of medieval philosophy, theology, history, and literature.

How exactly do linguistic landscapes communicate and what theoretical significance might follow from such an inquiry? This book addresses these questions by taking as its starting point the insight that the individual or organisation that is responsible for the production of a sign may not be physically present at the landscape itself. The information to be

conveyed is typically designed as a piece of signage to be emplaced at the site. Drawing on Goffman's notion of a production format, the book argues that the constructed piece of sign and its intended placement within the landscape combine to constitute an animator complex. This raises the possibility of a disruption to the sign and its placement in the landscape. The book describes various ways in which the integrity of the animator complex can be disrupted (e.g. the sign may be moved out of place through vandalism or acts of nature, or the organisation that the sign represents may no longer be in business), identifies different types of animators, and expands on the implications for phenomena such as affect, multivocality, footing and the materiality of language. In doing so, the book also demonstrates the value of bringing in Bakhtin's work on heteroglossia and the dialogicity of communication, integrating the ideas of Bakhtin with those of Goffman.

The Blueprint is going to be the greatest training investment you have ever made and is an absolute necessity for any serious strength athlete or personal trainer. If you have the work ethic, we have the plan! Research shows that building muscle helps the body burn more calories 24/7 and that resistance training is the most effective way to torch body fat. Yet that message is still lost on many women who fear that weight lifting will make them bulky, turn their skin green, and give them Incredible Hulk muscles like their boyfriends'. Women have more options than step aerobics or running on a treadmill to shed pounds: They can weight-train in a very specific manner designed to make the most of a woman's unique physiology. Lift to Get Lean is the first beginner's guide to strength training from Women's Health that is written specifically for women by a woman. Holly Perkins is a certified strength and conditioning specialist (CSCS) who has been teaching the fat-burning secrets of weight training exclusively to women for more than 20 years. Perkins doesn't follow men's rules when it comes to building muscle. Lift to Get Lean delivers a three-step system: Technique, Movement Speed, and the Last 2 Reps Rule, which make all the difference in developing the kind of strong, lean, and sexy body women want. Perkins offers four different 90-day training programs that efficiently build functional strength along with leaner legs, stronger arms, and a sexier butt. Why do sports captivate people? They allow us to watch human beings achieve peak performance, but, beyond physical strength and skill, what's really impressive is an athlete's mental prowess -- their will to succeed, engagement with their environment, and self-confidence. In Life as Sport, sport psychologist Dr. Jonathan Fader shares the skills that he teaches professional athletes--to enhance motivation, set productive goals, sharpen routines, manage stress, and clarify thought processes--and applies them to real-world situations. Dr. Fader's book is the product of thousands of hours of conversations with athletes from various teams and sports: power forwards, tennis phenoms, power-hitting outfielders, and battle-scarred linebackers, as well as hedge-fund managers, entrepreneurs, A-list actors, and dozens of other elite achievers in sports, business, and performing arts. It offers a

compendium of stories, theories, and techniques that have been helpful to players, coaches, and executives in professional sports. What emerges is more than just a set of techniques, but a life philosophy that anyone can live by: an internal code to help translate our talent and drive toward the highest plateaus of performance. Dr. Fader designs his strategies to be studied, learned, practiced, and improved. He offers his readers the same exercises that he uses in every session with a professional athlete. These exercises help you to get truly engaged, whether you are designing a new business plan, working to inspire a team or individual, or even falling in love. This is what it means to truly live life as sport--to approach it with the same immediacy, wonder, and engagement that athletes feel at their peak during a game. Life as Sport helps you to pursue your own goals with an enriched intensity -- not only because it creates new potential, but also because it helps you unlock what was always there to begin with. Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s. This book analyses the European Union's (EU) approach to peacebuilding in its Common Security and Defence Policy (CSDP) missions, and explores how this approach impacts the EU's role in international conflict management. Peacebuilding carried out through CSDP instruments has become central to the self-conception of the EU as an actor in international conflict management. EU missions and operations have, for the most part, been deployed to promote peacebuilding efforts in post-conflict situations, in particular through capacity-building, reforms and rebuilding of state structures. This book focuses explicitly on the peacebuilding dimension of the CSDP while exploring why and how the EU has adopted peacebuilding in its CSDP actions as a norm and a practice. It analyses how peacebuilding in EU missions is conceptualised, designed, governed and implemented. The book examines the extent to which EU missions and operations reflect a

normative and practical commitment of the EU to peacebuilding – that is to say, the extent to which CSDP instruments have been shaped by international peacebuilding norms and EU foreign policy. Drawing on empirical insights from decision- and policymaking processes in Brussels as well as from missions in Mali and in Bosnia and Herzegovina, this book offers critical perspectives on the EU's role as an international peacebuilding actor. This book will be of much interest to students of European security, EU policy, peace and conflict studies, security studies and international relations. How to make educated decisions regarding nutrition, exercise programs, choosing a health club facility and purchasing exercise equipment, clothing and accessories. Discover which of the Bible Prophecies for "The End Times" in the Book of Revelation have already been fulfilled by 2012, including: 9/11, which is described in amazing detail. The identity of the Beast 666, is clearly demonstrated to have been created during the Gulf War in 1990/91 and Osama Bin Laden is named and his involvement in the events of 9/11 positively identified. From the prophecies positively and indisputably indentified as having been fulfilled, it can be seen that they could only have been identified after they had happened. So what is the purpose of a series of revelations which cannot be identified until after the event? The author's conclusion is that when sufficient prophecies are seen to have been fulfilled, then people's attention might focus on the The Final Prophecy which is without a doubt the most amazing prophecy in The Bible. Even a cursory examination of The Final Prophecy, will show that it does not accord with the teachings of the modern day Christian Church, but on further investigation and with the application of modern scientific knowledge, it becomes completely reasonable, if somewhat disturbing. Amazingly, when the teachings of Jesus are re-examined in the light of this revelation, they take on a new meaning and appear to confirm the Author's interpretation of The Final Prophecy. This book illustrates how MAPLE can be used to supplement a standard, elementary text in ordinary and partial differential equation. MAPLE is used with several purposes in mind. The authors are firm believers in the teaching of

mathematics as an experimental science where the student does numerous calculations and then synthesizes these experiments into a general theory. Projects based on the concept of writing generic programs test a student's understanding of the theoretical material of the course. A student who can solve a general problem certainly can solve a specialized problem. The authors show MAPLE has a built-in program for doing these problems. While it is important for the student to learn MAPLE? in built programs, using these alone removes the student from the conceptual nature of differential equations. The goal of the book is to teach the students enough about the computer algebra system MAPLE so that it can be used in an investigative way. The investigative materials which are present in the book are done in desk calculator mode DCM, that is the calculations are in the order command line followed by output line. Frequently, this approach eventually leads to a program or procedure in MAPLE designated by proc and completed by end proc. This book was developed through ten years of instruction in the differential equations course.
